

COURSE EXAM PAPER 2

Name: _____
Period: 10.30am – 12.30pm
Date: Saturday 13th March 2010

You have 2 hours to complete this paper

1. Describe the management of a patient with diabetes and renal impairment who requires imaging prior to lower limb revascularisation.

2. Discuss the options for treatment of a patient with a mycotic aneurysm of the visceral segment of the abdominal aorta.

3. A 30 yr old sportsman presents with disabling claudication. What are the possible aetiologies for his arterial insufficiency? How would you investigate him?

4. What is the management of uncomplicated Type B aortic dissection?

5. Following varicose vein surgery, a 42 yr old woman complains of burning pain in the medial aspect of the ipsilateral calf consistent with a saphenous nerve injury. How will you manage this patient?

6. Describe the TASC II classification of lower extremity occlusive disease. How does this impact on recommendations for treatment?
